## Alabama Speedball:

Recognizing CNS Stimulant and Narcotic Analgesic Impairment

This free course is designed to teach officers about cues which may emerge when contacting a driver impaired by Central Nervous System Stimulants or Narcotic Analgesics. Both drug categories and their combination are frequently observed in drugged driving cases in Alabama. At the conclusion of this course, officers will be able to better recognize the different types of CNS Stimulants and Narcotic Analgesics as well as common methods of administration, duration of effects, and other signs and symptoms of impairment which may emerge during traffic contacts. This course provides four (4) hours of APOSTC CEU credit.

**PREREQUISITES:** Students who attend this course should have completed the Basic DUI Enforcement and Standardized Field Sobriety Testing (SFST) training curriculum and be APOSTC Certified Law Enforcement Officers. This course is also open to prosecutors, judges, and other judicial personnel interested in DUI.

**This course is not designed to certify an officer as a DRE.**
